

Template Week 6 – Networking

Student number:

Assignment 6.1: Working from home

Screenshot installation openssh-server:

Screenshot successful SSH command execution:

Screenshot successful execution SCP command:

Screenshot remmina:

Assignment 6.2: IP addresses websites

Relevant screenshots nslookup command:

Screenshot website visit via IP address:

Assignment 6.3: subnetting

How many IP addresses are in this network configuration 192.168.110.128/25?

What is the usable IP range to hand out to the connected computers?

Check your two previous answers with this calculator:

<https://www.calculator.net/ip-subnet-calculator.html>

Explain the above calculation in your own words.

Assignment 6.4: HTML

Screenshot IP address Ubuntu VM:

Screenshot of Site directory contents:

Screenshot python3 webserver command:

Screenshot web browser visits your site

Bonus point assignment – week 6

Remember that bitwise java application you've made in week 2? Expand that application so that you can also calculate a network segment as explained in the PowerPoint slides of week 6. Use the bitwise & AND operator. You need to be able to input two Strings. An IP address and a subnet.

IP: 192.168.1.100 and subnet: 255.255.255.224 for /27

Example: 192.168.1.100/27

Calculate the network segment

IP Address: 11000000.10101000.00000001.01100100

Subnet Mask: 11111111.11111111.11111111.11100000

Network Addr: 11000000.10101000.00000001.01100000

This gives 192.168.1.96 in decimal as the network address.

For a /27 subnet, each segment (or subnet) has 32 IP addresses (2^5).

The range of this network segment is from 192.168.1.96 to 192.168.1.127.

Paste source code here, with a screenshot of a working application.

```
Application.java x
1  import nl.saxion.app.SaxionApp;
2
3  public class Application implements Runnable {
4
5      public static void main(String[] args) {
6          SaxionApp.start(new Application(), width: 800, height: 800);
7      }
8
9      public void run() {
10         SaxionApp.println( text: "Welcome! Please choose one of the options below:");
11
12         boolean exit = false;
13
14         while (!exit) {
15             // Display the menu options
16             SaxionApp.println( text: "\nMenu:");
17             SaxionApp.println( text: "1. Check if the number is odd");
18             SaxionApp.println( text: "2. Check if the number is a power of 2");
19             SaxionApp.println( text: "3. Calculate the two's complement of the number");
20             SaxionApp.println( text: "4. Calculate network segment");
21             SaxionApp.println( text: "5. Exit");
22             int choice = SaxionApp.readInt( alternativeErrorMessage: "Choose an option:");
23
24             // Process the user's choice
25             switch (choice) {
26                 case 1 -> checkOdd();
27                 case 2 -> checkPowerOfTwo();
28                 case 3 -> calculateTwosComplement();
29                 case 4 -> calculateNetworkSegment();
30                 case 5 -> {
31                     SaxionApp.println( text: "Exiting the program...");
32                     exit = true;
33                 }
34                 default -> SaxionApp.println( text: "Invalid option. Please try again.");
35             }
36         }
37     }
38 }
```

```
